FIXED WALL-MOUNT RACKS

If you are looking for the right wall mount rack at the right price, the LINIER™ brand is the solution for you. The feature rich design gives you a universal enclosure, guaranteed to function for a variety of applications.

Cost-Effective Design – Innovative engineering and outside-of-the-box thinking paved the way for this durable, American-made, yet economical wall mount enclosure.

Numerous Laser Knock-Outs - Strategically placed laser knock-outs provide a plethora of locations to feed copper or fiber optic cabling into the cabinet, or to install an optional fan kit for temperature control.

Adjustable Rails – The included set of cage nut style rails fully adjust in 1 inch increments to accommodate the various depths of equipment on the market. Additional rails are available for devices that require 4-point mounting.

Removable Side Panels – Easy-to-remove side panels provide more access for growing or changing cabling schemes, as well as offer the option for increased air flow to prevent equipment from overheating.

Locking Doors and Side Panels – The locking feature provides additional security for all three access points, to keep your valuable rack mounted equipment safe from unauthorized use.

Reversible Glass Door – Tempered safety glass door can be removed or reversed to be left or right mounted, to accommodate your particular installation.

SWING-OUT WALL-MOUNT RACKS

The LINIER™ Swing-Out Enclosures are designed to solve the everyday problems technicians have while installing and managing the immense amount of cabling that is all-too-common with datacom and telecom equipment. Don't work around the rack... get a rack that works around you!

Economical Design – Smartly engineered to include all the features you would expect, at a competitive price point, and with the quality that comes with American manufacturing.

90 Degree Swing-Out – Lockable enclosure can be swung out 90° from the back frame allowing access to the rear of installed equipment. This capability provides additional space and accessibility for terminating, installing and managing cables.

Numerous Laser Knock-Outs - Strategically placed laser knock-outs provide a plethora of locations to feed copper or fiber optic cabling into the cabinet, or to install an optional fan kit for temperature control.

Adjustable Rails – The included set of cage nut style rails fully adjust in 1 inch increments to accommodate the various depths of equipment on the market. Additional rails are available for devices that require 4-point mounting.

Removable Side Panels – Easy-to-remove side panels provide more access for growing or changing cabling schemes, as well as offer the option for increased air flow to prevent equipment from overheating.

LINIER™

LINIER™ ADJUSTABLE RAIL KIT

The LINIER™ Fixed and Swing-out Enclosures are suited for a wide variety of applications. When installing network, security, or low-voltage electrical equipment sometimes additional mounting capabilities are required. For these types of situations, the LINIER™ Adjustable Rail Kit gives users the ability to integrate additional mounting rails, eliminating the difficulty of installing diverse equipment.

Universal Mounting – Cage nut style rails provide installers the flexibility to use their choice of the variety of hardware on the market today.

Adjustable Depth – Set of two rails can fully adjust in 1 inch increments to adapt to varying depth equipment.

Features

- Fully Adjustable
- 1 set of cage nut style mounting rails
- Installation hardware included
- Black powder coated steel
- Made in the USA
- 5-year limited warranty

12U SIDE MOUNT WALL RACK - 20" DEPTH

This innovative rack allows you to mount servers and other equipment on the wall and access everything from the side. In the past, mounting servers and power equipment on the wall was difficult because you could not access the back of the cabinet to make connections. Servicing equipment meant removing everything from the rack before you could access its connection. With this convenient side load rack you can install your servers and UPS on the wall, and have easy access to everything.

The maximum mounting depth is 20". The unique open air flow design of this wall mount rack is exactly what you are looking for.

- Weight Capacity: 350 pounds
- Max Mounting Depth: 20"
- Universal Cage Nut style rails
- Outside height: (top to bottom) 24³/₈"
- Outside width: (left to right) 20¹/₄"
- Outside depth: (front to back) 22¹/₈"

SKU 1915-3-200-12

8U SECURITY WALL RACK ENCLOSURE

Announcing another patent pending and innovative product designed directly from our customer's needs. This wall rack is perfect for almost any wiring room. With its generous 20"-deep chassis, this rack is perfect for CAT5, Fiber, Voice, or almost any cabling need. Snap-in rails make adjustments completely toolless.

- 22.25"W x 20.5"D x 17.25"H
- Supports over 250 lbs.
- Standard 19" EIA compliant
- Locking front door with a smoked grey acrylic window
- Top and bottom knockouts for mounting fan
- Top and bottom knockouts for wire management
- Snap-in rack rails make all adjustments toolless
- Weight: 50 lbs.
- This rack requires Cage Nuts and screws (page 14)

PHANTOM CLASS CORNER WALL-MOUNT CABINET

The Kendall Howard Corner Wall-Mount Cabinet is truly unlike any other rack on the market. The first and only EIA compliant wall mounted equipment rack that can mount in the corner of the room. This product is so unique that it falls under the protection of several pending patents. Imagine the ability to mount equipment in schoolrooms, offices, or utility rooms without taking up valuable wall space. Saving space means saving time and money.

Space Saving Design – Geometrically merges itself into the environment, saving space, opening up walkways and improving the overall flow and footprint of the room.

Multi-Angle Equipment Monitoring – Because of its ability to mount in the corner, its sleek design allows your equipment to be monitored from virtually anywhere in the room.

Easy One-Person Install Mounting System – We understand that every installation is different and brings with it its own challenges. It's because of this that we have included a brilliantly engineered mounting system that allows the cabinet to be installed by just one person while still maintaining a 650 pound load capacity.

Removable Locking Access Panels – Compliments the already user-friendly design by allowing access to the healthy 18-inch mounting capacity for maintenance or changes.

Reversible Lift-Off Door – Simple lift-off capability can be left or right mounted for a universal solution that can be tailored to each user's specific needs.

Open Back Design – As an added feature, we have created an open back design allowing cables to be easily fed through the wall, terminated, and managed prior to hanging the cabinet.

Top and Bottom Laser Knock-Outs – To top it all off, we have added laser knock-outs for fans and conduit in the top and bottom panels making it a breeze to configure for any application or environment.

Features

- Fully EIA compliant rail design
- Depth: 18" usable, 27" actual
- 10-32 tapped rails
- Smoked front door window
- 650 pound load capacity
- Black powder coat finish
- Limited lifetime warranty
- Made entirely in the USA

RACK HELPER

The small idea that grew into an American company – the Rack Helper. Kendall Howard's patent pending Rack Helpers were created to help network installers support extremely heavy rack components. Simply install this device just below any heavy component. No more running around looking for someone to help hold up your server or UPS during installations. An absolute must for all network installers.

THIN CLIENT-LCD WALL MOUNT

The Kendall Howard Thin Client/LCD Wall Mounting System allows installers to mount any VESA Compliant LCD monitor (15 to 22 inches) and a Thin Client to virtually any vertical surface. The two piece self locking design installs in minutes with an extremely low profile. The monitor mounting system has 15-30 degrees of tilt up or down (depending on your monitor) and extends 5" from wall. The Thin Client mount offers unprecedented venting to ensure your equipment stays cool and operating at peak performance. For added security use a standard padlock to secure and prevent tampering. Our wall mount system makes it simple to install and gives your installation a sleek, professional look.

Kit Includes:

- 1 Thin Client Mounting System
- 1 LCD Monitor Mounting Plate
- 4 Monitor Screws
- 4 Thin Client Screws

ADVANCED CLASSROOM TRAINING TABLES

The Kendall Howard Advanced Classroom Training Table Collection balances professionalism and practicality in a truly universal solution. The ACTT system will easily convert an out-dated, uninspiring training room into an engaging, respectable atmosphere by providing a clean, focused learning space that is suitable for any training or work space.

The modular design allows you to customize the layout and usability of your facility, minimizing distractions, and encouraging individuals to stay focused. The ACTT Collection is engineered to be affordable, yet quality driven, giving everyone the opportunity to orchestrate a structured and effective work space. The fully adjustable leg design allows the surface height to be modified to best suit each user. This capability helps to promote a uniform and professional solution throughout facilities which cater to various age groups, such as schools and community centers. The robust table tops are available in five stunning finishes to help transform any educational facility into a warm and inviting learning space that demands success.

Whether it's a high school classroom or a corporate training center, Kendall Howard's Advanced Classroom Training Tables will dramatically improve a user's overall experience, provide instructors with more fruitful results, and advance your educational facility to the next level.

The Kendall Howard Performance Series LAN Station and Workbenches are top of the line in quality and versatility. Our systems are completely modular, allowing you to design virtually any layout suitable for your environment. Each bench frame is made from the highest quality American-Made tube steel, welded and assembled in Kendall Howard's Chisago City, Minnesota manufacturing facility.

Now with more accessories than ever before!

- EIA Compliant 19" desk mounted Racking Systems
- Accessory mounting systems
- Keyboard Trays
- Drawers
- Casters
- LCD Monitor Mounts
- ...and many more!

Kendall Howard LAN Stations and Workbenches ship flat in completely enclosed crates to ensure that your products make it safely to your door!

Check out the details that keep our customers buying Kendall Howard workbenches again and again.

Performance Series™ LAN Stations have many uses including:

- Tech benches
- Network labs
- Assembly benches
- Shipping stations
- Security/Command consoles
- Server racks
- Computer repair benches
- Home office

Cable trays are built into the frame to keep wiring out of the way.

Upright beams allow you to channel cables from floor to upper shelving to ceiling.

All work surfaces are supported with heavy-duty steel supports that make this one of the strongest LAN benches on the market today.

Mounting and adjusting shelves is easy with our channel nuts and mounting hardware.

Computers, monitors and accessories not included. Shown with optional casters and other accessories.

PERFORMANCE PLUS™ 4-POST LAN/WORKBENCHES

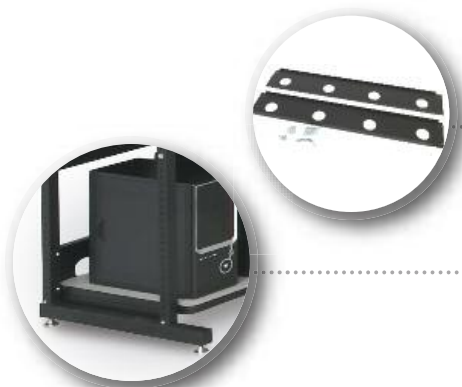

PERFORMANCE PLUS™ 4 POST TECHNICAL LAN/NETWORK FURNITURE

In addition to our Performance Series workbench system, Kendall Howard also provides the Performance Plus™ Series workbench system. With a maximum load of 850 lbs. per shelf and its modular design, you can now create a custom configuration what will work best for you – and have it shipped same day. Kendall Howard has made it simple to pick the number of side frames, and the width and depth you want each surface to be. With 24" and 30" depths; and 36", 48", 60" and 72" widths, you can configure exactly what you are looking for. Don't look for something custom. Instead, look for something customizable that ships same day, every day.

Back Plates/Cable Management

Kendall Howard back plates work as the back support for each shelf which also offers cable management. When configuring what you need, just add one back plate for each shelf you order. Back plates are available for all sizes.

SKU 7000-1-036-00	4-Post 36" Back Plate Kit
SKU 7000-1-048-00	4-Post 48" Back Plate Kit
SKU 7000-1-060-00	4-Post 60" Back Plate Kit

The Kendall Howard Performance Plus LAN racks are as easy to configure as they are to assemble.

This innovative design from Kendall Howard provides outside dimensions making it easy for you to lay out the space you are working with in just a few minutes. And Kendall Howard has designed a system that is completely modular so you can create exactly the workbench configuration you need. It's a customizable product without the custom price tag.

Below are some tips to make the planning process faster and easier.

Here are some simple steps for planning your next project:

1. First, determine the amount of space you are working with. This will save you time and money. Once you have the dimensions, we recommend drawing a top view. If you have a corner, insert the corner unit first. The corner unit will require 48 inches on each wall.

2. Next, determine what you are using the space for. The uses are endless – network storage, server rack, a computer repair station. Knowing this will make it easy to configure the unit exactly how you need it.

Also, determine the depth of the shelves and the accessories that you need. One example to keep in mind: If you are going to use this as a work space you can use a shallower, lower shelf (underneath the work surface) so you can sit at the desk comfortably and still not lose the storage space. If you are not going to sit at the unit, you may want deep shelves for larger equipment.

3. Determine the number of shelves that you need for your unit. Each shelf will require a back plate and a shelf support kit. Each set of side frame kits will require at least 2 shelves.

4. Determine the depth and width you want each shelf to be. Kendall Howard offers both 24" and 30" depths. We also offer the following widths, 36", 48", 60", 72". Square corner units are 48".

5. Determine the accessories that you need.

Power strips, drawers, keyboard trays, racking systems, accessory bars and LCD mounts. The list goes on and on.

- For every 24" of width, you have room for one under-counter accessory, they include keyboard trays, utility drawers and performance racking systems.

- If you are going to mount power or LCD monitors above the work surface they will require the Performance Plus Accessory bar.

TIP: If you are assembling a larger combined unit you can reduce the number of side frames by ganging the units together. For example the unit shown on page 37 shows 5 units ganged together. It only requires 6 Performance Plus side frame kits, rather than 10 side frame kits. By ganging them together you can save on the cost of each unit and the amount of labor it takes to install them.

While we have made the Performance Plus system easy to configure, if you would like help configuring or just confirming that it will do what you want, we are here to help.

When you have completed your configuration you can order it from one of our resellers, and we will ship your order same day.
